

New

# PLXR SYSTEM RAPID FITTING

GIVI

The new **PLXRapid fitting System** allows you to attach and remove the side-case hardware quickly and easily. The new system, designated as the **PLXR**, is supplied with special semi-turn screws which allow you to attach the large, visible, side-case hardware structure to much smaller supports that remain unseen (picture 1)

When the side-cases are not in use, it will take only a half turn of the specially designed screws (pictures 3 and 4) using a Givi key, specific to your hardware (included) and in a few seconds the motorcycle's tail converts back to its original, hardware free look. All the **PLXR** systems are designed for the use of a padlock on both the left and right sides to improve security.
